## PROJECT PORTFOLIO HIGHLIGHTS

A focused one-page portfolio companion for job applications, classifying project work across electronics, PLC/SCADA, industrial automation and electrical-analysis domains.

### Smart Vehicle Accident Detector

*Electronics / IoT*

Safety-oriented system concept for Bhutanese road conditions, using sensor/event detection and alerting logic to support faster accident response.

### Basic Health Monitoring Station

*Electronics / Biomedical*

Multi-parameter health kiosk with weight, height, temperature, SpO2, pulse, respiratory-rate estimation, BMI and QR reporting.

### PLC-Based Dam Water Level Control

*PLC / SCADA*

Dam/water-level indicator and control project using PLC logic for level states, pump/control response and operator indication.

### Material Handling & Conveyor Systems

*Industrial Automation*

PLC sequencing for conveyor movement, material flow, handling operations and HMI/SCADA-style control thinking.

### Solar Microgrid with Load Management

*Electrical Analysis*

Case-study work on solar generation, load prioritization, energy management and resilient distributed power systems.

### AI BMS & Solid-State Transformers

*Electrical / Emerging Tech*

Case-study analysis of AI-driven EV battery management and SST concepts for grid modernization and flexibility.

### Handwritten Bills & Receipts App

*Digital Automation*

Fuzzy Automation workflow for detecting handwritten bills/receipts and storing source images/key data in digital records.

### Ferro-Industry Electrical Exposure

*Heavy Industry*

DWAL exposure covering switchyard systems, motor-control wiring, capacitor banks, capacitor discharge safety and testing/maintenance rounds.
